

Solutions for handling of trays are as diversified as there are trays. Some can be picked with the UniGripper valves, some can be clamped, but most of the times we add a mechanical set up in order to handle the trays. These set ups range from clamping devices to locking options.

### *Single Tray Handling*

Gripper for filling trays with the vacuum head and then mechanical arms to lift the trays to another location or pallet. Arms can either grip the trays on the inside or outside.

### *Multiple Tray Handling*

Gripper for palletizing rows or trays combined with vacuum gripper palletize boxes
